

Carriage Rollers

Carriage Rollers - Carriage rollers are especially designed bearings that are used on lift masts in order to help them work within difficult environmental surroundings. Lift masts are normally subjected to shocks, oscillations, high dynamic and vibrations and static loads. This apparatus is regularly exposed to environmental influences such as dust, cold, heat, contamination, aggressive ambient air and moisture. Hence, the guidance arrangements of lift masts have to be particularly strong and have a specific high load carrying capability.

To be able to help compete in many various environmental surroundings, carriage rollers were designed for numerous lift masts. While having the ability to deal with a particularly high load carrying capacity, these bearings provided an economical operational security for the lift masts' guidance arrangements.
